*Abstract*.
*This literature review delves into student management strategies as a key element in enhancing the quality of education. Strategies such as personalized curriculum implementation, participatory approaches in decision-making, and character development programs are central to creating a holistic learning environment. The management of students is not merely administrative but includes strategies aimed at improving the quality of learning and student development. However, the review also identifies challenges, including resistance to change, technical constraints, and unequal access to technology among students. Understanding and overcoming these challenges are crucial for the successful implementation of student management strategies. The review provides a foundation for improvement recommendations, including intensive training for education staff in technology application, character development programs, and strengthening participatory strategies. By addressing these recommendations, educational institutions have the opportunity to enhance their student management strategies, promote holistic student development, and improve the effectiveness of learning.*

*Keywords: Student management, education quality, participatory strategies, Technology integration and character development.*

## I.    INTRODUCTION

Education is a planned effort to create an atmosphere and learning process for students to actively develop their potential in order to possess spiritual strength, self- control, personality, intelligence, noble character, and skills necessary for themselves, society, and the nation (Law No. 20 of 2003) (Risdianto, 2021). Education plays a central role in shaping the future of individuals and society. A crucial aspect of the education system is student management. Student management involves the organization of students from their entry into school until they graduate (Imron & Burhanuddin, 2003:52). Another view states that student management is a service that focuses on the organization, supervision, and services for students in and out of the classroom, including introduction, registration, and individual services such as the overall development of abilities, interests, and needs until maturity at school (Knezevich in Imron, 2011:6). The general purpose of student management is to organize student activities to support the teaching and learning process in school so that learning can proceed smoothly, orderly, and systematically, contributing to the overall education (Imron & Burhanuddin, 2003:53).

Student management encompasses not only administration and organization but also strategies aimed at improving the quality of learning and student development. Student management is crucial (Hamidah 2018:9; Kubat 2018:2; Rahmi 2014:2) as the place where students develop their potential (Bouchon, Hussain, and Konar 2015:3), concerning their individuality, social aspects, aspirations, needs, and other potential aspects of students (Diantoro 2018:3; Imron 2016:12; Meng 2016:1). The importance of student management is increasingly felt in the context of the dynamics of modern education influenced by technological developments, cultural changes, and the demands for relevant skills. This research focuses on student management strategies as the key to creating an optimal educational environment. Student management involves various aspects, ranging from classroom capacity management to a deep understanding of individual student needs. Student management plays a crucial role in improving the quality of education. Here are some reasons why student management is crucial in the context of improving the quality of learning:

**Resource Management**:

Student management helps optimize the use of educational resources, including facilities, textbooks, technology, and educational personnel. With effective management, schools can provide a more efficient and effective learning environment.

**Individualized Learning**:

With a deep understanding of the needs and learning styles of each student, student management enables a more personalized approach to learning. This can enhance students' understanding and engagement in the learning process.

**Prevention and Handling of Student Issues**:

Student management includes early identification and handling of student issues such as absenteeism, low learning success rates, or behavioral problems. Preventive actions and appropriate interventions can ensure that every student receives the support they need.

**Character Building and Ethics:**

Student management is not only related to academic aspects but also to character building and ethics. Building positive attitudes, moral values, and discipline will have a positive impact on the school atmosphere and the quality of the learning environment.

**Parent and Community Participation:**

Student management involves collaboration with parents and the community. By involving them in the education process, schools can gain greater support, create strong partnerships, and enhance the effectiveness of education.

**Use of Educational Technology:**

Student management also includes the integration of educational technology to enhance teaching and learning. The use of technology can provide broader access to educational resources and innovative learning methods.

**Improving Teaching Quality**:

With a good understanding of student needs, student management can support teachers in designing more relevant and engaging teaching. This contributes to the improvement of teaching and learning quality overall.This research aims to provide in-depth insights into the strategic role of student management in the current educational context and contribute to the development of best practices to achieve optimal learning quality.

## II.     METHODS

This research employs the systematic literature review method because it is considered to have high academic value through the collaboration of findings from experts on the relevant topic. The selection of this method was made beforehand by collecting a number of field research results that provide answers to the researcher's questions, followed by summarizing and analyzing those findings. This study focuses on the researcher's questions regarding student management strategies in improving the quality of learning. To achieve this goal, the research utilizes a systematic literature review following the PRISMA guidelines (Preferred Reporting Issue for Systematic Review and Meta-Analysis) (ahmad, 2021; Bella, 2023; kamalov, 2023).Literature search is conducted through online databases using the keyword "student management." The literature focused on in this study is limited to journals published between 2019 and 2023. A total of 200 article titles were found in this search. Subsequently, a selection was made based on the duplication category and non-journal types. Selection was also based on specific criteria to ensure that the chosen articles align with the research objectives.

## III.     RESULT AND DISCUSSION

From the results of the systematic literature review on student management strategies, various findings were discovered that provide profound insights into effective approaches to improving the quality of learning. Some key findings include:

**Identification of Key Strategies**:

The literature review identifies several key strategies in student management, including the implementation of personalized, participatory curricula, and character development. Strategies to enhance the quality of learning may involve various approaches designed specifically to meet the individual needs of students. One such approach is the use of personalized curricula, where the learning approach is tailored to

the characteristics and learning needs of each student. By implementing a curriculum that takes into account the uniqueness of each individual, the learning environment becomes more responsive and relevant. Participatory approaches in decision-making are also crucial in this strategy. By involving students in decision-making processes related to learning, such as choosing topics or teaching methods, an environment is created where students feel an active role in their learning experience.

This not only provides a sense of ownership but also encourages greater engagement and intrinsic motivation.Furthermore, the implementation of character-building programs is an essential aspect of student management strategies. These programs focus not only on academic aspects but also on developing fundamental character values, such as integrity, responsibility, and empathy. Thus, this approach strengthens student management holistically, creating an environment that supports the overall development of students in academic, character, and moral aspects.Overall, these strategies form the foundation for achieving more effective learning by considering the uniqueness and individual needs of students. Through this holistic approach, student management can become more adaptive and responsive to the dynamics of learning, creating an environment that supports comprehensive development for each student.

### Effectiveness of Participatory Strategies:

The review results indicate that participatory strategies, involving students in decision-making and lesson planning, have a positive impact on student engagement and academic achievement. Bringing students into the decision-making process is not just about giving them a sense of ownership over the learning experience; it also serves as a catalyst for active engagement and creates an environment that stimulates academic growth. By giving students responsibility in choosing their learning path, they become not only participants but also active stakeholders involved in shaping and designing their learning direction.This step goes beyond giving students a voice; it lays the foundation for their deeper involvement in the learning process. When students feel that their decisions are valued and influence how they learn, it can enhance intrinsic motivation and strengthen their sense of responsibility for their education.

Therefore, a learning environment that involves students in decision-making becomes more dynamic, adaptive, and aligned with their individual needs and interests.Moreover, this step creates the groundwork for active student engagement. Feeling a sense of responsibility in decision-making, students are likely to be more active in their learning, seeking further information and engaging more in discussions and collaborations with their peers. This not only creates a more engaging learning experience but also develops their critical thinking skills and analytical reasoning.Finally, involving students in decision-making creates an environment that supports academic growth. By considering students' preferences and individual needs, this approach recognizes that each student has a unique learning path. Therefore, anenvironment that promotes student participation in decision-making contributes to student-centered learning, creating a strong foundation for academic growth and personal development.

### The Influence of Technology in Student Management:

Findings show that the integration of educational technology, such as online learning platforms, has significantly contributed to student management, improving administrative efficiency and facilitating better communication. The positive contributions of technology involve streamlining various administrative tasks in the education environment. This includes automating processes such as attendance recording, student data storage, and class schedule management. With technology, teachers and administrative staff can allocate time more efficiently to teaching and learning aspects.Not only that, but technology also enables real-time monitoring of student progress. Teachers can quickly assess student achievements, identify areas that require special attention, and provide direct feedback. This not only supports a rapid response to individual learning needs but also creates an adaptive learning environment.Furthermore, the use of technology enhances interaction between teachers, students, and parents.

Online learning platforms, communication through email, and specialized education apps allow information and updates to be easily accessed by parents. This creates a stronger communication bridge between home and school, helping parents to be more involved in the educational development of their children.Thus, technology in the educational context serves not only as an administrative tool but also as a means to enhance teaching effectiveness, monitor student progress, and strengthen collaboration among

educational stakeholders. Wise integration of technology can be a driving force for positive change in educational management.

**Challenges in Implementation:**

The review also identifies several challenges in implementing student management strategies, including resistance to change, technical constraints, and unequal access to technology among students. In the review process, some obstacles to implementing student management strategies were also identified. Firstly, the emergence of resistance to change among educational staff and students may be a factor hindering the success of implementation. This resistance could stem from discomfort with new methods or reluctance to abandon existing practices.Next, technical constraints are also acknowledged as a challenge that needs to be overcome. There may be barriers to the integration of new systems, technical policies, or sufficient training for technology-related staff. The inability to overcome these technical constraints can hinder the effectiveness of student management strategies.Moreover, the existence of unequal access to technology among students is a significant issue. Students who do not have equal access to hardware or internet connectivity may face difficulties in fully benefiting from student management strategies that rely on technology. This indicates that the implementation of strategies must take into account this inequality to avoid leaving some students behind.By understanding and addressing these challenges, educational institutions can increase the chances of successfully implementing student management strategies. Efforts to manage resistance, overcome technical constraints, and provide equal access to technology can be critical steps in designing and implementing effective strategies.

**Recommendations for Improvement:**

The review results provide the basis for several improvement recommendations, including intensive training for educational staff in technology implementation, the development of character-building programs, and the reinforcement of participatory strategies.From the summary of the review results, several improvement recommendations emerge that have the potential to enhance the effectiveness of student management strategies. Firstly, it is recommended to provide intensive training for educational staff related to the implementation of technology. This training aims to enhance the staff's understanding of technology integration in the educational context and ensure that they have the necessary skills to manage technological changes effectively.Then, the recommendation involves the development of character-building programs.

This is aimed at reinforcing character values such as integrity, responsibility, and empathy among students. Character development is considered a crucial component in achieving holistic educational goals, and this recommendation provides impetus to create a deeper learning environment.Furthermore, the recommendation also includes strengthening participatory strategies. By reinforcing these strategies, educational institutions can create a more inclusive atmosphere and encourage student participation in the learning process. This recommendation emphasizes the importance of involving students in decision-making to build responsibility and ownership of their education.By implementing these recommendations, educational institutions have the opportunity to improve their student management strategies, promote holistic student development, and enhance learning effectiveness. By paying special attention to staff training, character development, and participatory strategies, institutions can advance their educational goals towards higher standards.

## IV.    CONCLUSION

In conclusion, this literature review provides profound insights into student management strategies that influence the quality of learning. The identification of key strategies such as the use of personalized curricula, participatory decision-making approaches, and the implementation of character-building programs highlights the importance of managing students holistically. These strategies not only create a learning environment that is responsive to the uniqueness of students but also supports academic growth and character development.However, the review results also highlight several challenges that may be encountered in the implementation of these strategies, including resistance to change, technical constraints, and unequal access to technology among students. Overcoming these obstacles is crucial for the successful implementation of student management strategies.The improvement recommendations derived from this review provide

guidance for enhancing the effectiveness of student management strategies. Intensive training for educational staff in technology implementation, the development of character-building programs, and the reinforcement of participatory strategies are steps that can be implemented to address challenges and improve student management practices.
